

R1 (max φ): sharpest left turn | R2 (min φ): loxodrome / gentlest left | R3 (max z): highest centroid

A large hexagon is divided into four triangles by three lines meeting at its center. The top triangle is blue, the right triangle is yellow, the bottom triangle is dark gray, and the left triangle is light gray.

- Step 3: $Ck-1 = f4 \rightarrow Ck = f2$ Left candidates ($Det \geq 0$): $f5, f6$
R1 picks $f5$ ($\varphi=108^\circ$, largest) R2 picks $f6$ ($\varphi=36^\circ$, smallest) R3 picks $f5$ ($z=0$, highest)
